THE MARKET PROBLEM

120M Strava athletes generate data. Nobody coaches them.

Who has this problem?

Recreational endurance athletes -- runners, cyclists, triathletes -- who track workouts with Strava or Garmin but have no one to interpret the data. That's **120M+ Strava users**, ~30M monthly active.

How big is this market?

Global sports coaching software: **$14B by 2028**. Strava Premium alone does $250M+ ARR. Human running coaches charge $150-400/month.

How do they solve it today?

They don't. Strava shows charts nobody reads. Garmin gives cryptic scores. TrainingPeaks is for pros. A human coach costs $200+/month and doesn't scale.

Strava is toxic

Strava turns training into a social performance. Athletes chase **kudos, segment crowns, and leaderboard spots** instead of actual progress -- pushing through injuries for likes, overtraining to stay visible. The incentive is followers, not fitness. **No one tells them to rest.**

120M+

STRAVA REGISTERED USERS

$200+

PER MONTH FOR A HUMAN RUNNING COACH

Kudos ≠ Coaching

SOCIAL VALIDATION DOESN'T PREVENT INJURIES

YOUR SOLUTION

An AI coach that auto-analyzes every workout and lets you talk to it

Zero-Click Analysis

Upload to Strava. Within seconds, a full AI coaching analysis lands in your dashboard. No clicks, no prompts. The pipeline runs automatically via webhooks.

Voice-Enabled AI Coach Agent

Ask "How was my run?" by voice. The agent queries your real data through 9 tools (HR zones, pace, prior workouts, training load) and responds with personalized insights. Not a generic chatbot -- a data-grounded agent.

Why 10x better?

Strava shows data. We **interpret** it. TrainingPeaks requires expertise. We **explain** it in plain language. A human coach sees you weekly. We analyze **every single workout, instantly**. And unlike Strava, the motivation is private -- **you train for your coach, not for kudos**.

Coach Agent
Groq · Llama 3.3 70B + 9 Tools

"How was my tempo run yesterday?"

COACH

Your 8k tempo showed great consistency. Avg HR 162 bpm, right in zone 3. I noticed 6% HR drift in the last 2k -- your aerobic base could use more easy volume. Tomorrow: easy 40-min recovery run.

"Compare it to last week's tempo"

COACH

Pace improved 8 sec/km, HR was 4 bpm lower at same effort. Your fitness is trending up.

BUSINESS MODEL

Freemium SaaS with AI coaching tiers

Free — $0

- Dashboard + last 3 activities
- Basic auto-analysis
- 5 coach chats / month

Pro — $9/mo

- Unlimited history + deep analysis
- Unlimited coach conversations
- Training load + form tracking
- Weekly AI training summaries
- Voice debriefs (ElevenLabs)

UNIT ECONOMICS

Revenue per user	$9/mo
Groq API (analysis + chat)	~$0.80
Convex + Vercel infra	~$0.50
ElevenLabs TTS	~$0.30
Cost to serve	~$1.60/mo
Gross margin	~82%

EXPANSION REVENUE

Team/club plans ($25/user), coaching marketplace (coaches white-label the AI), race-specific training plans as one-time purchases.

WHY US / WHY NOW

Builders who run

We are the users

We're endurance athletes who got tired of staring at Strava charts and guessing what they mean. We built the coach we wished we had.

Built to last

Production-grade architecture from day one: CI/CD, test coverage, documentation. If this gets traction, we're ready to commit.

Why now?

Groq's Llama 3.3 70B makes structured coaching analysis fast and free-tier friendly. LangChain tool calling enables real agentic coaching. Strava's webhook API unlocks zero-click automation. This wasn't possible 12 months ago.

BUILT WITH CURSOR -- COMPOUND ENGINEERING

99%+ of this codebase was written by Cursor agents with custom skills for implement, debug, test, and deploy. Self-improving docs -- every correction updates the knowledge base.

1. Human spots issue or pattern
2. Agent updates documentation
3. Future sessions avoid the issue
4. Quality compounds over time

THE RESULT

Full-stack app built in a hackathon weekend -- backend, AI pipeline, dashboard, tests, deployment -- with quality that compounds instead of decaying.

WHAT'S NEXT

From workout coach to holistic fitness platform

1 Urban Sports Club / Wellpass

Connect to gym & class aggregators to **recommend fitness classes in your area** based on your current training load, recovery status, and fitness goals. Tired legs after a long run? The coach suggests a yoga session at a studio near you. Fresh and ready to push? It finds a HIIT class that fits your schedule.

2 MyFitnessPal Integration

Pull dietary data to **close the nutrition-performance loop**. The coach correlates calorie intake, macros, and hydration with workout quality. "Your tempo run suffered -- you were 800 cal under target yesterday. Here's what to eat before tomorrow's session."

THE VISION

Today mAIcoach analyzes your workouts. Tomorrow it becomes the **single pane of glass for your entire fitness life** -- training, recovery, nutrition, and local activity discovery.

- **Now** — Strava workouts + AI coaching + voice
- **Next** — Gym classes + nutrition tracking
- **Later** — Sleep, stress, wearable health data
